ARTICLES and PAPERS

Australia. The interrelatedness of formal, non-formal and informal learning: evidence from labour market program participants

Definitions, differences and relationships between formal, non-formal and informal learning have long been contentious. There has been a significant change in language and reference from adult education to what amounts to forms of learning categorised by their modes of facilitation. Nonetheless, there is currently a renewed interest in the recognition of non-formal and informal learning internationally and in Australia.

Canada. Companies get colleges to do their training

Colleges and institutes across the country have long had a cozy relationship with companies and industries, with a goal of fuelling economic growth and funnelling students into vacant jobs. But with the country's skilled-labour shortage worsening—it's estimated to reach four million over the next quarter-century—worried companies are coaxing colleges into ever closer and more creative partnerships. In some cases, they're even helping design new programs.

USA. Good workers for good jobs: improving education and workforce systems in the US

Stagnant earnings and growing inequality in the US labor market reflect both a slowdown in the growth of worker skills and the growing matching of good-paying jobs to skilled workers. Improving the ties between colleges, workforce institutions, and employers would help more workers gain the needed skills. Evaluation evidence shows that training programs linked to employers and good-paying jobs are often cost-effective. Helping more states develop such programs and systems would help raise worker earnings and reduce inequality.

The Most Common Leadership Model - And Why It's Broken

When organizations' hire, develop, and promote leaders using a competency-based model, they're unwittingly incubating failure. Nothing fractures corporate culture faster, and eviscerates talent development efforts more rapidly, than rewarding the wrong people for the wrong reasons. Don't reward technical competency – reward aggregate contribution.

How the Skills Gap Affects the Global Economy

Employers in the world's 10 largest economies are all struggling with the same task: finding skilled workers to fill open positions. When businesses lack the necessary skilled workers, they suffer from less effective business performance, lower quality work, lower morale and higher employee turnover.

Gender Wage Gaps across Skills and Trade Openness

Several empirical studies have shown that the effect of openness on the gender wage gap depends on the skill requirement of the workplace. This paper offers a theoretical explanation to understand that finding. We integrate a statistical discrimination framework with the labour assignment approach to give general conditions under which the matching between firms and workers gives rise to a wider gender wage gap at the upper tail of the distribution, in accordance with empirical evidence. We further look at the effect of trade openness on the gender wage gap along the entire distribution.

DOCUMENTS

Canada. [From Better Skills to Better Work: How Career Ladders can Support the Transition from Low-Skill to High-Skill Work](#)

This brief explores 'Career Ladders', a series of connected literacy, language and skills training programs that enable individuals to secure employment within a specific industry or occupational cluster, and to advance to successively higher levels of education and employment within that sector. Each step is explicitly designed to meet the needs of both participants and employers in obtaining necessary workplace skills.

International Standard Classification of Education, 2013

The International Standard Classification of Education (ISCED) is a framework for assembling, compiling and analysing cross-nationally comparable statistics on education. ISCED is a member of the United Nations International Family of Economic and Social Classifications and is the reference classification for organizing education programmes and related qualifications by levels and fields of education. The availability of a common international classification is only the first step towards the collection of comparable data. The second step is to ensure a consistent application of the classification across countries. Thus, the aim of this manual is to offer clear guidelines on how to apply the ISCED Fields of Education and Training. This is done by both specifying a number of criteria to be observed and by providing lists of inclusions and exclusions from each field of education and training.

Skills development for youth living with disabilities in four developing countries

This paper outlines some of the key challenges and opportunities regarding skills development for youth with disabilities. It focuses on those who are no longer in formal education, but who, for a variety of reasons, are not yet in formal employment. Where possible, it outlines the extent of labour force participation amongst youth living with disabilities, and discusses the barriers to participation.

Aid to skills development: case study on Japan's foreign aid program

Two cases of skills development projects are presented, one in post-conflict Southern Sudan, another to develop a regional hub of training center in Senegal, each representing the different objective. They provide ideas on how Japanese assistance in this area can respond to challenging needs by study-based designing and building a

partnership among key stakeholders, and how it helps build institutional capacity through a long-term assistance.

Recognition of prior learning and experiences as a means to re-integrate early school leavers into education and training

The aim of this paper is to summarise the types of approaches and methods used across the world to assess and recognise learning early school leavers have acquired in non-formal and informal settings. The paper also discusses the rationale for providing opportunities for early school leavers to have their prior learning recognised and elaborates on the potential benefits for them. The paper ends with an analysis of the availability of such mechanisms for young early school leavers, highlights issues that need to be taken into consideration when engaging this target group in mainstream practices and elaborates on the future prospects.

Better Skills, Better Jobs, Better Lives A Strategic Approach to Skills Policies

The OECD Skills Strategy provides an integrated, cross-government strategic framework to help countries understand more about how to invest in skills in a way that will transform lives and drive economies. It will help countries to identify the strengths and weaknesses of their existing national skills pool and skills systems, benchmark them internationally, and develop policies for improvement.

YEI - Youth Employment Inventory

YEI is the first comprehensive database to provide comparative information on youth employment interventions worldwide. Comprising more than 300 youth employment programs from around 90 countries, YEI documents program design, implementation, and achieved results. The programs included range from interventions for improving the labor market information base (counseling, job search skills) to programs that aim at increasing the demand for youth labor (wage subsidies and public works) and those focusing on improving chances for young entrepreneurs (providing financial, technical, and training assistance).

NEWS in BRIEF

Afghanistan. First ever National TVET Strategy for Afghanistan launched in Kabul

The launch of the National Technical and Vocational Education and Training (TVET) Strategy is a watershed for the provision of vocational training and skills development in Afghanistan. Most importantly the strategy marks a renewed commitment to a coordinated approach to TVET and is a guiding document for all stakeholders to strengthen the four main pillars of the TVET system: governance, access, quality and financing.
