CVA's PICKS OF THE MONTH

Canada. [Meeting Expectations: Measuring the Impacts of Workplace Essential Skills Training](#)

The Measures of Success project (2009-2013) developed and tested an evaluation model to assess longer-term outcomes of workplace education programs for increasing literacy and essential skills (LES). The model was tested at 18 work sites in two Canadian provinces – 10 in Manitoba and 8 in Nova Scotia.

En français. Canada. [Répondre aux attentes : comment mesurer l'effet de la formation en l'alphabétisation et compétences essentielles dans les entreprises](#)

Le projet La mesure du succès (2009-2013) visait la conception et la mise en oeuvre d'un modèle d'évaluation permettant de mesurer les résultats à long terme de programmes de formation en alphabétisation et en compétences essentielles en milieu de travail. Le modèle a été mis à l'essai dans 18 entreprises situées dans deux provinces 10 au Manitoba et 8 en Nouvelle-Écosse.

Canada/British Columbia. [An Analysis of a Foundational Learning Program in BC: the Foundations Workplace Skills Program \(FWSP\) at Douglas College](#)

In this paper, we analyze the workings of a small-scale program involving foundational learning that is targeted at unemployed workers in Surrey, BC by exploiting information contained in the administrative data set that was compiled through its execution. Although this data set contains huge gaps and has a structure that is far from ideal, it contains some information regarding outcomes for the participants and outputs generated by the operations of the program. We investigate three outcomes for the participants of this program, namely i) a return to work, ii) a return to school, and iii) an improvement in the score obtained from a diagnostic test that gauges literacy and essential skills. We also make recommendations in regards to developing a data set that would be suitable for designing and carrying out an evaluation of labour market interventions such as the one covered in this paper.

Italy. [La Meglio Gioventù: Earnings Gaps across Generations and Skills in Italy](#)

This paper documents the evolution of the experience-earnings profiles of private employees in Italy over the first six years of working career across three birth cohorts (1965-1969, 1970- 1974, 1975-1979). We explore the average trends and disentangle how the patterns vary according to individual skills, defined in terms of both educational levels and percentiles of the unconditional earnings distribution. Unlike previous studies, and in contrast with the expectations prompted by the skill-biased literature, our results surprisingly show that the Italian "best of youth", i.e. the best workers of the most recent cohorts (the high skilled), have suffered, compared to the previous cohorts, an earnings penalty much more severe than that experienced by unskilled workers. This finding also raises questions about the effectiveness of the European Employment Strategy, which repeatedly stressed the importance of human capital and technological knowledge as main drivers for European performance.

[How Open and Free Content will Transform Post-secondary Education](#)

If current trends continue, we may well see the day quite soon when most, if not all, digital 'content' will be open and free to use for educational purposes. If that trend develops further, and is combined with online learning, there will be major consequences for teaching, learning and, above all, our post-secondary institutions.

Teaching at community colleges. Why I Teach Plato to Plumbers

“So you teach Plato to plumbers?” Yes, indeed. But I also teach Plato to nurses’ aides, soldiers, ex-cons, preschool music teachers, janitors, Sudanese refugees, prospective wind-turbine technicians, and any number of other students who feel like they need a diploma as an entry ticket to our economic carnival.

DOCUMENTS

Canada. Career decision-making patterns of Canadian youth and associated postsecondary educational outcomes, 2000 to 2010

Career decision-making for the majority of Canadian youth is an on-going process, occurring throughout adolescence and typically lasting well into adulthood. As well, all those who showed consistency in their career expectations at some point were more likely to complete postsecondary education at the Bachelor degree level or higher at age 25, compared with the 25-year-olds still undecided on a career path.

Canada. Apprenticeship Completion, Certification and Outcomes

The purpose of this research was to develop a more comprehensive understanding of the relationship between apprenticeship completion, certification and outcomes. The main focus was on training and labour market outcomes, with a lesser emphasis on

socio/demographic outcomes.
